

**Numbers** represent quantities that can be decomposed into smaller parts.

One-to-one correspondence and a sense of 5 and 10 are essential for fluency with numbers.

### **BIG IDEAS**

Repeating elements in patterns can be identified.

Objects have attributes that can be described, measured, and compared.

**Familiar events** can be described as likely or unlikely and compared.

_Curricular Competencies	Content
Students are expected to do the following:	Students are expected to know the following:
<ul> <li>Reasoning and analyzing</li> <li>Use reasoning to explore and make connections</li> <li>Estimate reasonably</li> <li>Develop mental math strategies and abilities to make sense of quantities</li> <li>Use technology to explore mathematics</li> <li>Model mathematics in contextualized experiences</li> <li>Understanding and solving</li> <li>Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving</li> <li>Visualize to explore mathematical concepts</li> <li>Develop and use multiple strategies to engage in problem solving</li> <li>Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures</li> </ul>	<ul> <li>number concepts to 10</li> <li>ways to make 5</li> <li>decomposition of numbers to 10</li> <li>repeating patterns with two or three elements</li> <li>change in quantity to 10, using concrete materials</li> <li>equality as a balance and inequality as an imbalance</li> <li>direct comparative measurement (e.g., linear, mass, capacity)</li> <li>single attributes of 2D shapes and 3D objects</li> <li>concrete or pictorial graphs as a visual tool</li> <li>likelihood of familiar life events</li> <li>financial literacy — attributes of coins, and financial role-play</li> </ul>
Communicating and representing     Communicate mathematical thinking in many ways     Use mathematical vocabulary and language to contribute to mathematical discussions	
<ul> <li>Explain and justify mathematical ideas and decisions</li> <li>Represent mathematical ideas in concrete, pictorial, and symbolic forms</li> </ul>	

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

Numbers to 20 represent quantities that can be decomposed into 10s and 1s.

Addition and subtraction with numbers to 10 can be modelled concretely, pictorially, and symbolically to develop computational fluency.

## **BIG IDEAS**

Repeating elements in patterns can be identified.

Objects and shapes have attributes that can be described. measured, and compared.

Concrete graphs help us to compare and interpret data and show one-to-one correspondence.

Curricular Competencies	Content
Students are expected to do the following:	Students are expected to know the following:
Reasoning and analyzing  Use reasoning to explore and make connections  Estimate reasonably  Develop mental math strategies and abilities to make sense of quantities  Use technology to explore mathematics  Model mathematics in contextualized experiences  Understanding and solving  Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving  Visualize to explore mathematical concepts  Develop and use multiple strategies to engage in problem solving  Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures  Communicating and representing  Communicate mathematical thinking in many ways  Use mathematical vocabulary and language to contribute to mathematical discussions  Explain and justify mathematical ideas and decisions	<ul> <li>number concepts to 20</li> <li>ways to make 10</li> <li>addition and subtraction to 20 (understanding of operation and process)</li> <li>repeating patterns with multiple elements and attributes</li> <li>change in quantity to 20, concretely and verbally</li> <li>meaning of equality and inequality</li> <li>direct measurement with non-standard units (non-uniform and uniform)</li> <li>comparison of 2D shapes and 3D objects</li> <li>concrete graphs, using one-to-one correspondence</li> <li>likelihood of familiar life events, using comparative language</li> <li>financial literacy — values of coins, and monetary exchanges</li> </ul>
Represent mathematical ideas in concrete, pictorial, and symbolic forms	

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

Numbers to 100 represent quantities that can be decomposed into 10s and 1s.

Development of computational fluency in addition and subtraction with numbers to 100 requires an understanding of place value.

### **BIG IDEAS**

The regular change in increasing patterns can be identified and used to make generalizations.

Objects and shapes have attributes that can be described. measured. and compared.

Concrete items can be represented, compared, and interpreted pictorially in **graphs**.

### **Learning Standards**

#### **Curricular Competencies** Content Students are expected to do the following: Students are expected to know the following: Reasoning and analyzing number concepts to 100 · Use reasoning to explore and make connections benchmarks of 25, 50, and 100 and personal referents Estimate reasonably addition and subtraction facts to 20 (introduction of computational strategies) Develop mental math strategies and abilities to make sense of quantities addition and subtraction to 100 Use technology to explore mathematics repeating and increasing patterns • **Model** mathematics in contextualized experiences • change in quantity, using pictorial and symbolic Understanding and solving representation Develop, demonstrate, and apply mathematical understanding through play, inquiry, and symbolic representation of equality and inequality problem solving direct linear measurement, introducing standard metric Visualize to explore mathematical concepts units Develop and use **multiple strategies** to engage in problem solving multiple attributes of 2D shapes and 3D objects Engage in problem-solving experiences that are connected to place, story, cultural pictorial representation of concrete graphs, using onepractices, and perspectives relevant to local First Peoples communities, the local to-one correspondence community, and other cultures • likelihood of familiar life events, using comparative Communicating and representing language • Communicate mathematical thinking in many ways • financial literacy — coin combinations to 100 cents, and Use mathematical vocabulary and language to contribute to mathematical discussions spending and saving Explain and justify mathematical ideas and decisions Represent mathematical ideas in concrete, pictorial, and symbolic forms

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

Fractions are a type of **number** that can represent quantities. Development of computational fluency in addition, subtraction, multiplication, and division of whole numbers requires flexible decomposing and composing.

### **BIG IDEAS**

Regular increases and decreases in **patterns** can be identified and used to make generalizations.

Standard units are used to describe, measure, and compare attributes of objects' shapes. The likelihood of possible **outcomes** can be examined, compared, and interpreted.

	Content
Students are expected to do the following:	Students are expected to know the following:
Reasoning and analyzing	number concepts to 1000
Use reasoning to explore and make connections	<ul> <li>fraction concepts</li> </ul>
Estimate reasonably	addition and subtraction to 1000
<ul> <li>Develop mental math strategies and abilities to make sense of quantities</li> <li>Use technology to explore mathematics</li> </ul>	<ul> <li>addition and subtraction facts to 20 (emerging computational fluency)</li> </ul>
Model mathematics in contextualized experiences	<ul> <li>multiplication and division concepts</li> </ul>
Understanding and solving	<ul> <li>increasing and decreasing patterns</li> </ul>

Represent mathematical ideas in concrete, pictorial, and symbolic forms	dollars, and earning and payment

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

Fractions and decimals are types of numbers that can represent quantities.

Development of computational fluency and multiplicative thinking requires analysis of patterns and relations in multiplication and division.

### **BIG IDEAS**

Regular changes in patterns can be identified and represented using tools and tables.

Polygons are closed shapes with similar attributes that can be described, measured, and compared.

Analyzing and interpreting experiments in data probability develops an understanding of chance.

Students are expected to do the following:  Reasoning and analyzing  Use reasoning to explore and make connections  Estimate reasonably  Develop mental math strategies and abilities to make sense of quantities  Use technology to explore mathematics  Model mathematics in contextualized experiences  Understanding and solving  Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving  Visualize to explore mathematical concepts  Develop and use multiple strategies to engage in problem solving  Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures  Students are expected to know the following:  number concepts to 10 000  decimals to hundredths  addition and subtraction to 10 000  multiplication and division of two- or three-digit numbers by one-digit numbers  addition and subtraction facts to 20 (developing computational fluency)  multiplication and division facts to 100 (introductory computational strategies)  increasing and decreasing patterns, using tables and charts  algebraic relationships among quantities  one-step equations with an unknown number, using all	Curricular Competencies	Content

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- **Incorporate** First Peoples worldviews and perspectives to **make connections** to mathematical concepts

- line symmetry
- one-to-one correspondence and many-to-one correspondence, using bar graphs and pictographs
- probability experiments
- financial literacy monetary calculations, including making change with amounts to 100 dollars and making simple financial decisions

**Numbers** describe quantities that can be represented by equivalent fractions.

Computational **fluency** and flexibility with numbers extend to operations with larger (multi-digit) numbers.

### **BIG IDEAS**

Identified regularities in number **patterns** can be expressed in tables.

Closed shapes have **area and perimeter** that can be
described, measured,
and compared.

**Data** represented in graphs can be used to show many-to-one correspondence.

Curricular Competencies	Content
Students are expected to do the following:	Students are expected to know the following:
Reasoning and analyzing	number concepts to 1 000 000
Use reasoning to explore and make connections	decimals to thousandths
Estimate reasonably	equivalent fractions
<ul> <li>Develop mental math strategies and abilities to make sense of quantities</li> </ul>	<ul> <li>whole-number, fraction, and decimal benchmarks</li> </ul>
Use technology to explore mathematics	<ul> <li>addition and subtraction of whole numbers to 1 000 000</li> </ul>
Model mathematics in contextualized experiences	multiplication and division to three digits, including division
Understanding and solving	with remainders
Develop, demonstrate, and apply mathematical understanding through play,	addition and subtraction of <b>decimals</b> to thousandths
inquiry, and problem solving	<ul> <li>addition and subtraction facts to 20 (extending computational fluency)</li> </ul>
Visualize to explore mathematical concepts	**
<ul> <li>Develop and use multiple strategies to engage in problem solving</li> </ul>	<ul> <li>multiplication and division facts to 100 (emerging computational fluency)</li> </ul>
Engage in problem-solving experiences that are <b>connected</b> to place, story,      Where the second parameters are least first Parameters are represented to place.	<ul> <li>rules for increasing and decreasing patterns with words,</li> </ul>
cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures	numbers, symbols, and variables
Communicating and representing	one-step equations with variables
Communicate mathematical thinking in many ways	<ul> <li>area measurement of squares and rectangles</li> </ul>
	<ul> <li>relationships between area and perimeter</li> </ul>
<ul> <li>Use mathematical vocabulary and language to contribute to mathematical discussions</li> </ul>	<ul> <li>duration, using measurement of time</li> </ul>
Explain and justify mathematical ideas and decisions	classification of prisms and pyramids
Represent mathematical ideas in concrete, pictorial, and symbolic forms	single transformations
	one-to-one correspondence and many-to-one

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts

correspondence, using double bar graphs

- probability experiments, single events or outcomes
- financial literacy monetary calculations, including making change with amounts to 1000 dollars and developing simple financial plans

Mixed **numbers** and decimal numbers represent quantities that can be decomposed into parts and wholes.

Computational **fluency** and flexibility with numbers extend to operations with whole numbers and decimals.

### **BIG IDEAS**

Linear relations can be identified and represented using expressions with variables and line graphs and can be used to form generalizations.

Properties of objects and shapes can be described, measured, and compared using volume, area, perimeter, and angles. Data from the results of an experiment can be used to predict the theoretical probability of an event and to compare and interpret.

## **Learning Standards**

# **Curricular Competencies**

Students are expected to do the following:

#### Reasoning and analyzing

- Use logic and patterns to solve puzzles and play games
- Use reasoning and logic to explore, analyze, and apply mathematical ideas
- Estimate reasonably
- Demonstrate and apply mental math strategies
- Use tools or technology to explore and create patterns and relationships, and test conjectures
- Model mathematics in contextualized experiences

### **Understanding and solving**

- Apply multiple strategies to solve problems in both abstract and contextualized situations
- Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving
- · Visualize to explore mathematical concepts
- Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures

### Communicating and representing

Use mathematical vocabulary and language to contribute to mathematical discussions

### trade at a sur a sur a stad to long out the a fall out

- Students are expected to know the following:
  - small to large numbers (thousandths to billions)
     multiplication and division facts to 100 (developing computational fluency)
  - order of operations with whole numbers
  - factors and multiples greatest common factor and least common multiple
  - improper fractions and mixed numbers
  - introduction to ratios

Content

- whole-number **percents** and percentage discounts
- multiplication and division of decimals
- increasing and decreasing **patterns**, using expressions, tables, and graphs as functional relationships
- one-step equations with whole-number coefficients and solutions
- perimeter of complex shapes
- area of triangles, parallelograms, and trapezoids
- angle measurement and classification
- volume and capacity
- triangles

- Explain and justify mathematical ideas and decisions
- Communicate mathematical thinking in many ways
- Represent mathematical ideas in concrete, pictorial, and symbolic forms

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to other areas and personal interests
- Use mathematical arguments to support personal choices
- Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts

- combinations of transformations
- line graphs
- **single-outcome probability**, both theoretical and experimental
- financial literacy simple budgeting and consumer math

Decimals, fractions, and percents are used to represent and describe parts and wholes of **numbers**. Computational **fluency** and flexibility with numbers extend to operations with integers and decimals.

### **BIG IDEAS**

Linear relations can be represented in many connected ways to identify regularities and make generalizations. The constant ratio between the circumference and diameter of circles can be used to describe, measure, and compare spatial relationships. Data from circle graphs can be used to illustrate proportion and to compare and interpret.

Curricular Competencies	Content
Students are expected to do the following:	Students are expected to know the following:
Use logic and patterns to solve puzzles and play games     Use reasoning and logic to explore, analyze, and apply mathematical ideas     Estimate reasonably     Demonstrate and apply mental math strategies     Use tools or technology to explore and create patterns and relationships, and test conjectures     Model mathematics in contextualized experiences	<ul> <li>multiplication and division facts to 100 (extending computational fluency)</li> <li>operations with integers (addition, subtraction, multiplication, division, and order of operations)</li> <li>operations with decimals (addition, subtraction, multiplication, division, and order of operations)</li> <li>relationships between decimals, fractions, ratios, and percents</li> </ul>

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- Use mathematical arguments to support personal choices
- Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts

The principles and processes underlying operations with **numbers** apply equally to algebraic situations and can be described and analyzed.

Computational fluency and flexibility with numbers extend to operations with rational numbers.

### **BIG IDEAS**

Continuous linear relationships can be identified and represented in many connected ways to identify regularities and make generalizations. Similar shapes have proportional relationships that can be described, measured, and compared.

Analyzing the validity, reliability, and representation of **data** enables us to compare and interpret.

Curricular Competencies	Content
Students are expected to do the following:	Students are expected to know the following:
Reasoning and analyzing  Use logic and patterns to solve puzzles and play games  Use reasoning and logic to explore, analyze, and apply mathematical ideas  Estimate reasonably  Demonstrate and apply mental math strategies  Use tools or technology to explore and create patterns and relationships, and test conjectures  Model mathematics in contextualized experiences  Understanding and solving  Apply multiple strategies to solve problems in both abstract and contextualized situations  Develop, demonstrate, and apply mathematical understanding through play, inquiry, and problem solving  Visualize to explore mathematical concepts  Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures  Communicating and representing  Use mathematical vocabulary and language to contribute to mathematical discussions  Explain and justify mathematical ideas and decisions	<ul> <li>operations with rational numbers (addition, subtraction, multiplication, division, and order of operations)</li> <li>exponents and exponent laws with whole-number exponents</li> <li>operations with polynomials, of degree less than or equal to 2</li> <li>two-variable linear relations, using graphing, interpolation, and extrapolation</li> <li>multi-step one-variable linear equations</li> <li>spatial proportional reasoning</li> <li>statistics in society</li> <li>financial literacy — simple budgets and transactions</li> </ul>

- Communicate mathematical thinking in many ways
- Represent mathematical ideas in concrete, pictorial, and symbolic forms

- Reflect on mathematical thinking
- Connect mathematical concepts to each other and to **other areas and personal interests**
- Use mathematical arguments to support personal choices
- Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts
